YOUR PROJECT TITLE

Marten de Jong s4557182
Length: 3-4 pages

Abstract

Your abstract here (max 10-15 lines).

1 Introduction

- This template is based on the template of previous iterations of the course.

- Introduce your research (context)

- Problem statement and research question, including concrete hypothesis

2 Related Work

Use peer-reviewed sources relevant to your own project, discuss them in relation to your own work and cite properly. If you find additional papers, discuss them (optional).

You can cite a paper by using BibTeX like this (Culotta et al., 2015), or the following way if the paper is part of the sentence like Culotta et al. (2015), where the BiBTeX entry is in the `mybib.bib` file. The proper use of LATEX and citation using BiBteX is part of this assignment.

3 Data

Describe the data you will use in your research. Describe the data collection, the way you obtained the part of the data you would work with (precisely describe how you will obtain the data for your independent and dependent variables). You can provide a table with examples to give the reader an idea of the dataset you are using. For example, "We will construct ..."[1]

Describe how you would obtain data for your variables. If it relies on an automatic way to inferring the variable (e.g., for gender) describe precisely how you would do it. Mention also possible limitations of the way you would obtain the data.

Pre-processing Describe how you would preprocess the data. Describe all design choices (e.g., would you tokenize the data? how would you handle retweets?).

Table 1 provides a summary of the data that will be used in this study.

A	B
A	B
A	B

Table 1: Overview of the data set. Provide an appropriate caption.

4 Predicted Results

In this section you will describe your expected results based on the literature you found.

Table 2 summarizes...

A	B	C
A	B	C
A	B	C

Table 2: Add a caption

Discussion This is the part in which you discuss what it would mean to find these results and their implications.

5 Conclusion

Wrap up your report by giving answers to your research question in the beginning. For example,

---

[1][Note: use 'we' rather than 'I', even though you are the only author (this work is individually done!) - this is common practice in many fields]
